We produce a high-definition product by the latest equipment and the accumulated know-how.

Manufacturing technique

Painting

High-intensity paint

It is the technology that the glossy surface which is not acquired in general paint is acquired. Worth of goods is raised by giving gloss to the product surface, and it leads up to the improvement of the grade of goods. Moreover, it is painted in a clean room and a quality control is also thoroughgoing

High-intensity urethane paint

Piano finish paint

High-intensity silver paint

Electric conduction paint

By applying it to the inside of an electric product, it makes electric current transmission smooth and it is an effective measure against a noise. Ground treatment, electric wave prevention, and magnetic preventive measures are more strongly demanded with the thin shaping product or a miniaturization. This paint contributes to superior performance and miniaturization of apparatus.
