One-stop-service

■ We are the best partner of product development!

As we take an order, we do embody the request from the design of goods to finished goods with our one-stop-service in the demanded delivery time. There is no troublesomeness to order to plural manufacturers. The secret is that it is tied seamlessly from a design to highly precise finished goods with three-dimensional data. Not only an order from a design, but also an order from any timing of a production process is available. A customer's dream is embodied at the shortest time and the minimum cost by all the processes from development to finished goods. Please entrust our one-stop-service!

It is easy to do work by high-precision data.

wonderful goods are likely to be produced such smooth product development is the first.

Now! It is a mass-production start!

Molding tool accuracy is also a cinch! Good goods will be made.

A customer is also given full satisfaction!

Cost reduction success!
Time-for-delivery shortening realization!

Oh! It is a data trouble.

You should attach a hand from what. If it is this, do I feel anxious about the point from the beginning?

Time for delivery is OK or not? Do we also need extra expence?

Wow! We must do molding tool correction due to a design error again.

What are you doing!

It does not meet a customer deliverly. A customer is furious!

Process list

High-precision data connects a manufacturing process seamlessly.

The designer who had all the production processes in the company, and had full knowledge is in charge of product development. Repeating a review with each process in the company as initial flow management We can predict "the arising problem which will come out and exist" at early stage of a design in advance. And it incorporates in a design. Therefore, work does not return to upstream software development. Problems which often exists, for example, mold tool intensity is weak in case of the form. "a mechanism not being realized in case of the design". and "if in case of this structure, an assembly is difficult". We do not have these problems. Also in a production process, We have information sharing in groupware The production management system using WEB ties, it is produced efficiently even the dotted factory .

An order can be received from every timing of a production process.

Even a parts order only , the stance of our company does not change When you have the problems in a molding tool and the problems in production . We propose the solution in consideration of the product performance, part parts and product structure. We stand on a position of the customer, not only mere problem indication, and an awareness of the issues is shared. Please do not hesitate to consult with us.

A design/plan

However we may use highly precise three dimensional CAD, If we can not produce smoothly, It is not meaningful for us. We consider three dimensional CAD to be only extension of a pencil. It evaluates calmly what kind of thing was produced by the completed data.

< Development

A trial production / Verification

The quality of a product is decided in the early stage of a design. Therefore, at our company, We are putting a lot of energy into management of a development early stage. A review at each process is repeated and a problem is solved. Quality is made and it is produced with the early stage of development.

< Quality assurance

Manufacturing technique / Production control

Production is performed by the optimal construction method that suited goods. We adopte the manufacturing method which gives added values with the products appearance and the function .

< Production engineering

< Production control

Inspection / Shipment

The finished products are shipped through a severe delivery inspection. We supply products based on a customer's request quality and delivery. We are doing our best in lead time shortening every day.

< Quality assurance

< Production control

Guarantee of Quality

We send positive products to you by the daily quality check based on thoroughness of initial flow management. We promise to offer the high product of a quality using a three-dimensional measuring instrument and a color difference meter.
